#### Description of Internship at GAS Design Center

As an intern, working at GAS Design center, you will work with our staff on a daily basis (M-F 8-5) performing all types of tasks that we ourselves do to complete client projects. For example, training in design such as logo, branding, package, web etc is part of the learning experience. In the studio, you will have access to the facilities including a full wet process darkroom, digital processing facilities, lighting studio, and other materials such as a kiln, welding and space to work on projects that may use these methods. The mentoring and training is focused and can be a helpful insight into gaining knowledge about the design and photography industry. Interns that have an interest in design and photography, are encouraged to work on their own projects during their stay.

We accept one month internships from June threw August.
